Japanese Utility Model Kokai No. 54-132427

Laid-opening date: 13 September 1979

Application No.: 54-22300

Filing date: 29 May 1973
(The filing date of the patent application
is applicable)

Applicant: JEX CO LTD, Osaka

Title: Beauty globe

Claim:

A beauty globe comprising:

involving, between upper and lower sheet supports A, B
constituting the globe, a skin protective medical liquid
having an emolient action, and

forming the globe, while partially releasing, by heat
sealing (4), sewing, adhering, bonding under pressure, or
the like so that said protective medical liquid 1, 1' may be
brought into direct contact with the skin of a hand.

Related disclosure:

These days, because of development and popularization of
composite detergents it has come on the stage, as a problem,
that a human body is affected by said detergents. In case a
detergent is continuously used, an excessive-taking phenomenon
occurs in the sebum film of a hand thereby causing a skin dry
and irritations of a hand. Further, such irritations of the
hand skin are affected greatly by the external air, and it is
known that particularly in case the hand skin is exposed to
air of low temperature the irritations are caused by dis-
persion of the water content.

The objection of the present invention is to provide, to
prevent a hand from its irritations, a globe for supplying

sebum to the hand from the outside to protect the hand and to prevent the water content from evaporation, and in short a beauty globe made of paper, non-woven cloth or the like in which a medical agent having a skin protective action is permeated into or coated onto the inside of the globe contacting the hand whereby the irritations of the skin are remedied by using the globe e.g. at sleeping at night.

Brief Description of the Drawings:

Fig. 1 is an embodiment showing the manufacturing steps of the beauty globe relating to the present invention;

Fig. 2 shows a structuring and continuously-forming state of the beauty globe;

Fig. 3 is another embodiment of the beauty globe according to the invention; and

Fig. 4 is another manufacturing embodiment.

In the drawings:

- A, B...Laminate supports
- 1, 1,...Protective liquid
- 2.....Nozzle
- 3.....Bucket
- 4.....Heat sealer
- 5.....Cutter
